

# YelloVet

## NATURAL FEED ADDITIVE

**Herbal Bio Actives Delivered through Nanotechnology.**

**YelloVet**, an immune-boosting supplement, is crafted using nano technology to enhance the bioavailability and absorption of phytomolecules such as curcuminoids (turmeric), thymol (thyme), and eugenol (clove). **YelloVet** helps strengthen your farm bird's defense mechanism and reduces stress. This results in higher immunity, productivity, and growth in poultry birds.

Nanotechnology works on the principles of size reduction, surface modification and high volume to surface ratio, resulting in achieving maximum productivity using minimal inputs

### What to look for in YelloVet

**Enhances the humoral and cell mediated immunity**

**Nano encapsulation technology**

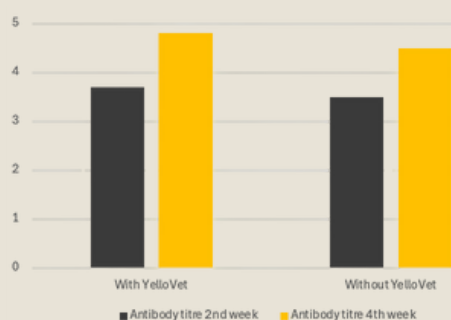

**Better feed conversion ratio**

### Yellovet Trial Results

Trials conducted across Farms in **USA and India**

Antibody Titer Values

#### Field Trials Reports:

- **6% Increase in Antibody Titre**
- **4% Better Feed Conversion Ratio**
- **3% Increase in Egg Productivity**
- **2% Decrease in Mortality Rates**

#### Lab Test Reports:

- **30% Reduction in Oxidative Stress**

Oxidative Stress Against Trolox
